Supreme flexibility – the abrasive strips FP 73 WK

The **abrasive strips FP 73 WK** is a product specially designed for treating surfaces. It is especially well suited for processing

- paint,
- **varnish** and
- filler.

Reliable results can be achieved with this abrasive in a variety of conditions. Thanks to the excellent adaptability of the material with excellent grain adhesion even on the edge area, large areas can be processed quickly and thoroughly. This is to the benefit of both professional users and do-it-yourselfers.

The abrasive strips FP 73 WK – take advantage of an increased service life

The **FP 73 WK** with its ability to greatly reduced loading. Minimised clogging is important as it allows the abrasive to cleanly abrade over painted or varnished surfaces at any time. Another major benefit of these **abrasive strips** is their overall service life, which is substantially greater than in other products. The coating is semi-open, while the backing is composed of a film. The **film backing** proves to be exceptionally **tear-resistant** in day-to-day use. As the backing is also **self-fastening**, it can also be changed quickly and with no effort at any time: It only takes a few seconds to attach and detach the abrasive to and from the tool. This backing thus allows the user to focus on their actual task: sanding.

The right abrasive strips for every application

As is customary at Klingspor, the **abrasive strips FP 73 WK** are available in an extensive range of grit sizes, ensuring that customers will find the abrasive that matches their application best. Designed for use in combination with handheld machines, the **abrasive strips** can also be used for sanding by hand. The use lends itself, for example, to a commercial hand sanding block. When paired with such a sanding block, it will finish a wide variety of sanding tasks with perfect ease. Flexibility is the pivotal element in this use scenario. This is why professionals put their trust in the **abrasive strips FP 73 WK** made by Klingspor.
